

MILITARY FIRE APPARATUS SERVICE PROGRAM (MFASP)

ACHIEVE COMPLIANCE AND SAFETY CERTIFICATION FOR FIREFIGHTING EQUIPMENT

PROGRAM

The Military Fire Apparatus Service Program (MFASP) is designed to achieve compliance and safety certification for military firefighting equipment and apparatus. The program provides Commands with the opportunity to either certify, repair or replace current firefighter equipment and or purchase complete F.I.R.E.S. Gear ensembles. Our goal is to increase the overall readiness of Armed Forces firefighting teams and their ability to perform duties in fire suppression and life safety intervention. MFASP relieves liability from the Command for failure to validate the safety of its firefighting teams while operating with equipment that has not been certified or tested after issuance. Our customer focused program will improve your organizations Fire and Emergency Services readiness.

DARLEY DEFENSE SERVICE PACKAGES

MFASP consists of three service packages designed to ensure compliance to current federally established standards for firefighter equipment, including National Fire Protection Association (NFPA), Occupational Safety and Health Administration (OSHA), as well as the equipment's performance to manufacturer's established guidelines

► MFASP I - INSPECTION PROCESS

Apparatus and equipment issued to the armed services is inspected and tested for compliance and safety certification.

► MFASP II - REFURBISHMENT, CERTIFICATION AND REPLACEMENT PROCESS

Apparatus and equipment issued to the armed services is serviced, cleaned, replaced and/or certified to current adopted standards where applicable.

► MFASP III - COMPLETE ENSEMBLE OF F.I.R.E.S./BUNKER GEAR

As new soldiers join your Command, this package will allow you to purchase a complete set of gear for each individual.

AFTER ACTION REVIEW

Upon completion of each service, Darley Defense will provide a detailed report to the Command. These reports will consist of specific areas outlined in the Scope of Work (SOW) and information regarding readiness, serviceability and deployability of each firefighting team inspected. The report also serves as a tool to establish current on hand equipment inventory to determine the remaining life span of the inspected equipment. The report will be provided in two formats - a hard copy and an electronic version.
