

CAR FIRE BLANKET

CONTROLS ANY TYPE OF CAR FIRE WITHIN SECONDS

The Bridgehill reusable car fire blanket provides the quickest and most effective way to extinguish a car fire by removing oxygen supply. Toxic gases and smoke are stifled immediately in fossil cars. The same immediate result is achieved in electric cars, whose batteries have not been affected by the fire.

Leave the blanket for at least 20 minutes for immediate and complete isolation of fire and smoke. Use the blanket to immediately isolate the fire and block the smoke. If needed, add another blanket on top.

FEATURES

- Reusable up to 30x
- Designed for electric car fires, cut also controls any type of car fire within seconds
- The ultimate solution to handle fire in electric cars
- Suitable for all vehicles, including SUVs
- Delivered in a smart bag or cabinet for wall mounting
- **Ideal Uses:** Fire stations, boats, gas stations, parking lots, charging stations, tunnels and more
- **Dimensions:** 18' x 24'
- **Weight:** 55 lbs.

USER FRIENDLY

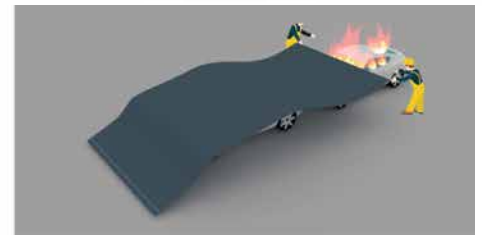

Easy two-person operation

1. Place the fire blanket on the ground in front or back of the car.

2. Using the straps, pull the fire blanket over the entire car in one continuous movement.

3. Make sure the fire blanket is tight to the ground. Wait at least 20 minutes before removing the fire blanket.

When responding to an electric car fire, follow steps one through three. After the fire blanket is tight to the ground, wait three minutes and listen. If a strong fuzz-type sound is detected about every 3-15 seconds, this is most likely thermal runaway. Leave the fire blanket on until the sound ceases. This is a small fire that travels from cell to cell. The fire blanket will prevent additional fires in the car.
