

TRUSTED WORLDWIDE SINCE 1908

SMARTSTART™ WIRELESS REMOTE PUMP CONTROL

The SmartStart™ allows users to easily control pumps wireless from over 300'.

COMPATIBILITY

- Darley portable and skid mounted pumps featuring Honda V-Twin engines

Handheld and onboard control.

The Darley Smart Start™ is designed to allow wireless remote controlled start/stop, choke, throttle up and down, and an auxiliary control circuit, this option gives the user infinite flexibility when it comes to pump control. With a transmitter range of over 300', customers have the ability to easily control the pump from inside the cab without bulky control panels and excessive wiring. Standard on-board controls are included with the option.

- Handheld wireless remote control
- Compact size
- Designed to allow wireless remote
 - Starting / stopping
 - Choke
 - Throttle control up / down
 - Momentary auxiliary circuit is also available on the remote control for operation of an optional 12 volt electric primer
- Allows for easily remote mounting a second control in the cab of a truck without the expense of running wires long distances
- Multiple remotes can be easily configured to operate a single unit
- Uses standard AAA batteries
- Transmitter range is 300'+, dependent on surrounding structures
- Remote mounted antenna is available for increased reception to receiver
- Lighted onboard master control panel mounted at the unit, with full control, hour meter and discharge pressure gauge
